

FITTINGS UNLIMITED, INC.

Adapter & Fitting Specialist

Flange Adapters and Components

Fittings and flanges are required in nearly every installation job as an intermediate joint between the pump, valve or actuator port to another component in the system.

We offer a variety of flange adapters in forged, bent tube and one piece configurations. From 1/2 " to 3" connection sizes in Code 61 or 62 for JIC, Pipe, O-Ring, Socket Weld, Threaded, Split Flange, Connector Plates, Plugs, and our Caterpillar equivalent line.

Our steel flange products meet SAE J518 standards for use in marine, mobile equipment, machine tools, earth moving machinery and other industries.

Need something larger or in stainless steel? We can accommodate that too.
